

Diagnostic Exercise

From The Davis-Thompson Foundation*

Case #: 104 Month: September Year: 2018

Contributor: Francisco A. Uzal, California Animal Health and Food Safety Laboratory System, San Bernardino Branch, University of California – Davis.

Clinical History: A 2-year-old Quarter horse gelding with a history of receiving Banamine® (flunixin meglumine) for an undetermined period. The horse developed colic that lasted for several hours and it was unresponsive to aggressive treatment with several pain killers. Due to the poor prognosis, euthanasia was performed.

Necropsy Findings:

Follow up Questions: Morphologic diagnosis, condition, etiology, and pathogenesis.

The Diagnostic Exercises are an initiative of the **Latin Comparative Pathology Group (LCPG)**, the Latin American subdivision of The Davis-Thompson Foundation. These exercises are contributed by members and non-members from any country of residence. Consider submitting an exercise! A final document containing this material with answers and a brief discussion will be posted on the CL Davis website (http://www.cldavis.org/diagnostic_exercises.html) Editorial Committee.
