

Latin Comparative Pathology Group

The Latin Subdivision of the CL Davis Foundation

Diagnostic Exercise

Case #: 60 Month: September Year: 2015

Contributor: W. Roger Kelly MVSc, PhD Assoc. prof (retired), University of Queensland Veterinary School.

Clinical History: Serosal (top) and mucosal surfaces (below) of a segment of the right dorsal colon of a thoroughbred yearling, which was submitted to euthanasia because of persistent ill-thrift and worsening exercise intolerance.

Necropsy Findings:

Figure 1

Figure 2

Follow-up questions: Please provide a description of the macroscopic alterations, morphologic diagnosis, most likely etiology, and list the additional findings elsewhere in the carcass.

Please send your comments/questions to the whole LCPG list by hitting "reply to all".

A final document containing this material with answers and a brief discussion will be posted on the C. L. Davis website by the end of the current month (http://www.cldavis.org/lcpg_english.html).
